Inside the apheresis machine there is a blood processing chamber that spins (centrifuges) the blood, separating it into layers. Red cells are heaviest and sit at the bottom, platelets and white cells are in the middle and plasma is at the top as it is the lightest.

Apheresis, apheresis procedure, therapeutic apheresis ...

Therapeutic apheresis is a therapy for removing pathogenic substances from blood using filters and adsorbers. This can lead to a medical improvement when other treatment options have reached their limit. In contrast to conventional therapies, therapeutic apheresis focuses on "washing" harmful components out, instead of supplying substances. The healthy blood or plasma is returned back ...
