This book provides an up-to-date and highly readable account of what we know about urban ecosystems and how that can be applied in planning and management. Urban areas are probably among the most dynamic and rapidly changing ecosystems on the planet that present huge challenges in terms of understanding and directing their development in ways that are beneficial for both humans and other species.

**Urban Ecosystems: Understanding the Human Environment ...**
With over half of the global human population living in urban regions, urban ecosystems may now represent the contemporary and future human environment. Consisting of green space and the built environment, they harbour a wide range of species, yet are not well understood. This book aims to review what is currently known about urban ecosystems in a short and approachable text that will serve as a key resource for teaching and learning related to the urban environment.

**Urban Ecosystems: Understanding the Human Environment ...**
The future of urban ecosystems. View abstract. With over half of the global human population living in urban regions, urban ecosystems may now represent the contemporary and future human environment. Consisting of green space and the built environment, they harbour a wide range of species, yet are not well understood.

**Urban Ecosystems: Understanding the Human Environment ...**
Ecology in cities examines how the characteristics of the urban landscape mosaic, and various parts of it, affect human health and well-being. Human consumption and behaviour in one urban area can affect the health and well-being of people in other, such as through export of waste and trans-boundary emissions and pollutant flows.

**Urban ecology and urban ecosystems: Understanding the ...**
Urban ecosystems as public health realms. Human beings, like other organisms, are influenced by the selective action of the urban environment. Social structure and interactions, physiology and health, morphology (e.g. increased obesity), and even long-term changes in genetics of human urban residents, may be associated with urban living [20, 4••]. The diversity of conditions within built-up areas creates many risk factors possibly affecting human health and well-being.
