A Course of Modern Analysis: an introduction to the general theory of infinite processes and of analytic functions; with an account of the principal transcendental functions (colloquially known as Whittaker and Watson) is a landmark textbook on mathematical analysis written by E. T. Whittaker and G. N. Watson, first published by Cambridge University Press in 1902.

Alf van der Poorten accurately summarized this book in his Notes on Fermat's Last Theorem by writing, "Notwithstanding its title, "Whittaker and Watson" is neither "modern" nor "analysis," as we now understand it. But it is the bible of the classical special functions." The last edition of this bible was in 1927, and it is still in print from Cambridge.

This end has been successfully achieved by following the sensible course of explaining the methods of modern analysis in the first part of the book and then proceeding to a detailed discussion of the transcendental function, unhampered by the necessity of continually proving new theorems for special applications.

The books introduced "Modern Mathematics" topics such as Set theory, Matrices, Vectors and
Mappings alongside the more traditional topics. An innovative feature of the course is the
series of Computer topics which appeared from book 4 onwards. The intention was that these
would form an introduction to computer studies.
