Additive Manufacturing Technologies: 3D Printing, Rapid ...

The most common term for additive fabrication is rapid prototyping. The term "rapid" is used because additive processes are performed much faster than conventional manufacturing processes. The fabrication of a single part may only take a couple hours, or can take a few days depending on the part size and the process.

Additive Fabrication (Rapid prototyping, tooling)

Oftentimes, 3D printing, rapid prototyping, and additive manufacturing are referenced as interchangeable processes. Although the concepts are similar, the results are different. It ' s like suggesting that a convertible has the same towing capacity as a truck, and that both are capable of competing in the next NASCAR race.
