## High-performance liquid chromatography - Wikipedia

HPLC Introduction. HPLC stands for High-Performance Liquid Chromatography. Before HPLC was available, LC analysis was carried by the gravitational flow of the eluent (the solvent used for LC analysis) thus required several hours for the analysis to be completed. Even the improvements added in later time we're able to shorten the analysis time slightly.

HPLC injection is a technique used to load the sample into the HPLC system. This process is done using a specially designed injection system which is a separate and prominent part of the HPLC system. The most popular injector is the rheodyne injector. The injection is done manually by an external syringe or autoinjector.

## HPLC injection: The technique and instrumentation

HPLC is a technique that employs a liquid mobile phase. Stationary phases are typically chemically modified inorganic silicas or polymeric beads packed into a column. In HPLC, the separation mechanism that partitions components of a sample between the two phases can take many forms, depending on the nature of the samples and the phases employed.
