Basic statistics for public health and policy | University ...

Normal diet: 17/303 had heart attacks = 5.61%

Mediterranean diet: 5/302 had heart attacks: 1.67% $1.67 / 5.61 = 29.5\%$. So here, we can see that the 'treatment' appears to have reduced heart attacks by almost 30%, which sounds great, but can be a bit misleading. A heart attack is actually a fairly rare event.

Understanding statistics: a guide for medical students
Welcome to Introduction to Statistics & Data Analysis in Public Health! This course will teach you the core building blocks of statistical analysis - types of variables, common distributions, hypothesis testing - but, more than that, it will enable you to take a data set you've never seen before, describe its key features, get to know its strengths and quirks, run some vital basic analyses and then formulate and test hypotheses based on means and proportions.

Introduction to Statistics & Data Analysis in Public Health
There are few well known statistics are the average (or "mean") value, and the "standard deviation" etc. Standard deviation is the variability within a data set around the mean value. The "variance" is the square of the standard deviation. The linear trend is another example of a data "statistic". Steps in the Data Analysis Process

Offered by University of Amsterdam. Understanding statistics is essential to understand research in the social and behavioral sciences. In this course you will learn the basics of statistics; not just how to calculate them, but also how to evaluate them. This course will also prepare you for the next course in the specialization - the course Inferential Statistics.

Basic Statistics | Coursera

A prevalence rate is the total number of cases of a disease existing in a population divided by the total population. So, if a measurement of cancer is taken in a population of 40,000 people and 1,200 were recently diagnosed with cancer and 3,500 are living with cancer, then the prevalence of cancer is 0.118. (or 11,750 per 100,000 persons)
