Bond Valuation Examples - Solution Page 3 Bond Valuation – Example 2 Assume that a corporate bond has a par value of \$1,000 and 15 years until it matures. Also assume that investors require an annual effective rate of return of 12.36% (compounded semi-annually), that coupon interest is paid semi-annually, and that the current price for this bond is \$931.18.

Chapter 7 - Bond Valuation Examples with Solutions - Bond ...

Solutions to Questions and Problems 2. Price and yield move in opposite directions; if interest rates rise, the price of the bond will fall. This is because the fixed coupon payments determined by the fixed coupon rate are not as valuable when interest rates rise—hence, the price of the bond decreases.

CHAPTER 7 INTEREST RATES AND BOND VALUATION

solutions manual, rounding may appear to have occurred. However, the final answer for each problem is found without rounding during any step in the problem. NOTE: Most problems do not explicitly list a par value for bonds. Even though a bond can have any par value, in general, corporate bonds in the United States will have a par value of \$1,000.

CHAPTER 5 INTEREST RATES AND BOND VALUATION

INTEREST RATES AND BOND VALUATION Solutions to Questions and Problems 1. The price of a pure discount (zero coupon) bond is the present value of the par value. Remember, even though there are no coupon payments, the periods are semiannual to stay consistent with coupon bond payments. So, the price of the bond for each YTM is: a.
