Your doctor might check your C-reactive protein level for infections or for other medical conditions. A high-sensitivity C-reactive protein (hs-CRP) test, which is more sensitive than a standard test, also can be used to evaluate your risk of developing coronary artery disease, a condition in which the arteries of your heart are narrowed.

## **Rheumatoid Arthritis: What CRP Levels Say About You**

C-reactive protein (CRP) is a marker of inflammation in the body. Therefore, its level in the blood increases if there is any inflammation in the body. C-reactive protein, along with other markers of inflammation (erythrocyte sedimentation rate , " sed rate , " or ESR ) are also sometimes referred to as acute phase reactants.

C-reactive protein is a marker of inflammation and is typically not detected in the blood unless some degree of inflammation is present in the body. CRP measurement is made using a blood sample from a vein. The sample is then taken to a laboratory and analyzed. The traditional CRP measurement is often used to detect inflammation in the body.
