Synthesis (Chapter 13)

Messenger RNA,  
transfer RNA, and  
ribosomal RNA work

together in prokaryotic  
and eukaryotic cells to  
translate DNA's genetic  
code into functional  
proteins. These proteins,  
in turn, direct the  
expression of genes.

13.1 RNA. The main  
differences between  
RNA and DNA are that

## Chapter 13 Rna

1) A ribosome attaches to a. mRNA molecule in the cytoplasm. 2) As the ribosome reads each codon of mRNA, it directs tRNA to bring the specified amino acid into the ribosome. 3) One at a time, the ribosome then attaches each amino acid to the growing chain. and breaks the bond between the tRNA and amino

CHAPTER 13 Connect  
to the Big Idea RNA  
and Protein Synthesis

The cell uses a process called transcription to create RNA. The first step for the RNA synthesis is when RNA polymerase binds to the DNA strand. The DNA strand is then split and one part is copied to create a complementary
