The main treatment is surgery to remove the tumour. The aim of this is to cure the cancer. If surgery cannot completely remove the NET, treatment will aim to relieve symptoms and improve quality of life. Other treatment options you may have include:

Neuroendocrine tumours (NETs) - Macmillan Cancer Support

Neuroendocrine secretory protein-55, a member of the chromogranin family, is seen in pancreatic endocrine tumors but not intestinal NETs. Imaging. For morphological imaging, CT-scans, MRIs, sonography (ultrasound), and endoscopy (including endoscopic ultrasound) are commonly used. Multiphase CT and MRI are typically used both for diagnostics and for evaluation of therapy.

Neuroendocrine tumor - Wikipedia

Some neuroendocrine tumors produce excess hormones (functional neuroendocrine tumors). Others don't release hormones or don't release enough to cause symptoms (nonfunctional neuroendocrine tumors). Diagnosis and treatment of neuroendocrine tumors depend on the type of tumor, its location, whether it produces excess hormones, how aggressive it is and whether it has spread to other parts of the ...

Neuroendocrine tumors - Symptoms and causes - Mayo Clinic

Neuroendocrine tumors (NETs) can cause lots of different symptoms, from shortness of breath to headaches to belly cramps. Find out more about symptoms and types of NETs.

Neuroendocrine Tumors: Types and Symptoms

There are also two treatments – everolimus and sunitinib – that can be used to treat some neuroendocrine tumours in adults if: they can't be fully removed using surgery; they've spread; the symptoms are getting worse; Everolimus is taken as a tablet, and sunitinib is taken as a capsule.

Neuroendocrine tumours - NHS

Surgery is the main treatment for hypoglycemia due to an insulinoma. Except for insulinoma, the effects of hormone-secreting pancreatic tumors are typically well managed with medication. The role of surgery in the treatment of other pancreatic tumors depends on each individual case. Adrenal gland: These tumors usually are benign.

Multiple Endocrine Neoplasia | MD Anderson Cancer Center

Surgery is the primary treatment for parathyroid tumors. Removal of nearby thyroid gland and lymph nodes may sometimes be performed. When cancer has metastasized, additional methods and drugs are necessary to help the body excrete excess calcium.

Endocrine Cancer - Cancer North

Patients with a pancreatic neuroendocrine tumor that has spread to the liver may be treated with a somatostatin analogue or a drug that regulates signaling in the pancreatic islet cell, everolimus. Other neuroendocrine tumors are typically removed by surgery and other treatments may be recommended.

Multiple Endocrine Neoplasia Type 1 | Cancer.Net

Treating cancer with hormones is called hormone therapy, hormonal therapy, or endocrine therapy. Hormone therapy is mostly used to treat certain kinds of breast cancer and prostate cancer that depend on sex hormones to grow. A few other cancers can be treated with hormone therapy, too.

Hormone Therapy | Hormone Treatment for Cancer | Endocrine ...

Multiple endocrine neoplasia (MEN) syndromes are inherited disorders that affect the endocrine system. The endocrine system is made up of glands and cells that make hormones and release them into the blood. MEN syndromes may cause hyperplasia (the growth of too many normal cells) or tumors that may be benign (not cancer) or malignant (cancer).. There are several types of MEN syndromes and each ...
