The purpose of General Equilibrium Foundations of Finance is to give a sound economic foundation of finance based on the general equilibrium model with incomplete markets which embodies the famous CAPM as an important special case. This goal is achieved by giving reasonable restrictions on the agents' characteristics that lead to a well determined financial markets model having a unique competitive equilibrium. The innovation of this book is to transfer and to extend the theoretical results on the structure of competitive equilibria into the modern context of incomplete financial markets. General Equilibrium Foundations of Finance should be easily accessible by advanced Ph.D. students as well as by theorists of any subfield of mathematical economics. It should be interesting both for theorists who are looking for possible applications of rigorous theorizing as well as for practitioners who seek for a theoretical foundation of fruitful applications of financial markets' models.

Offering a comprehensive exploration of the revolutionary developments occurring in the world's financial markets and institutions, this edition looks at innovation, globalization and deregulation - with a focus on the actual practices of financial institutions, investors and financial instruments.

This book provides readers with essential concepts from financial economics for an integrated study of the financial system and the real economy. It discusses how long-term market prices are determined and affected by population growth, technological progress and non-renewable resources. The meaning of market prices is examined from the perspective of households and from the perspective of firms. The book therefore connects different fields of finance, which usually focus only on either the households' side or the firms' side.

Since the 2008 financial crisis, a resurgence of interest in economic and financial history has occurred among investment professionals. The book's editors, David Chambers and Elroy Dimson, are the academic leaders of the Newton Centre for Endowment Asset Management at the University of Cambridge in the United Kingdom.
