Thank you certainly much for downloading fuzzy graphs and fuzzy hypergraphs studies in fuzziness and soft computing. Most likely you have knowledge that, people have look numerous times for their favorite books once this fuzzy graphs and fuzzy hypergraphs studies in fuzziness and soft computing, but end in the works in harmful downloads.

Rather than enjoying a fine PDF like a mug of coffee in the afternoon, otherwise they juggled following some harmful virus inside their computer.

fuzzy graphs and fuzzy hypergraphs studies in fuzziness and soft computing is nearby in our digital library an online permission to it is set as public as a result you can download it instantly. Our digital library saves in multipart countries, allowing you to acquire the most less latency period to download any of our books similar to this one. Merely said, the fuzzy graphs and fuzzy hypergraphs studies in fuzziness and soft computing is universally compatible taking into consideration any devices to read.

It means the expansion of graph models for the modeling complex systems. In case of modelling systems with fuzzy binary and multiarity relations between objects, transition to fuzzy hypergraphs, which combine advantages both fuzzy and graph models, is more natural. It allows to realise formal optimisation and logical procedures.

In the course of fuzzy technological development, fuzzy graph theory was identified quite early on for its importance in making things work.

Two very important and useful concepts are those of granularity and of nonlinear approximations. The concept of granularity has evolved as a cornerstone of Lotfi A.Zadeh's theory of perception, while the concept of nonlinear approximation is the driving

The fuzzy graph  $H = (v, \mu)$  is called a partial fuzzy subgraph of  $G = (V, \mu)$  if  $v \subseteq V$  and  $\mu \leq \mu$ . Similarly, the fuzzy graph  $H = (P, v, \mu)$  is called a fuzzy subgraph of  $G = (V, \mu, \mu)$  induced by  $P$  if  $P \subseteq V$ ,  $v(x) = \mu(x)$  for all  $x \in P$  and  $\mu(x, y) = \mu(x, y)$  for all  $x, y \in P$ . For the sake of simplicity, we sometimes call  $H$  a fuzzy subgraph of  $G$ .

However, fuzzy hypergraphs are more advanced generalization of fuzzy graphs. Whenever there is a need to define multiary relationship rather than binary relationship, one can use fuzzy hypergraphs. In this chapter, interval-valued fuzzy hypergraph is discussed

Intuitionistic fuzzy graphs and intuitionistic fuzzy digraphs are special cases of the intuitionistic fuzzy hypergraphs. Proof. An intuitionistic fuzzy graph on a set  $V$  is a pair  $H = (V, E)$ , where  $E$  is a symmetric intuitionistic fuzzy subset of  $V \times V$ .

That is,  $\mu_B: V \times V \rightarrow [0, 1]$  and for each  $x$  and  $y$  in  $V$ , we have  $\mu_B(x, y) = \mu_B(y, x)$ ,  $\nu_B(x, y) = \nu_B(y, x)$ .

Some specific application areas presented from fuzzy graph theory are cluster analysis, pattern classification, database theory, and the problem concerning group structure.

Applications of fuzzy hypergraph theory to portfolio management, managerial decision making with an example to waste management, and to neural cell-assemblies are given.
