The Handbook of Psychoeducational Assessment is a practical guide for educational and psychological professionals using norm-referenced tests in the ability, achievement, and behavioral assessment of children. Written by key individuals involved in the construction and evolution of the most widely used tests, this book provides critical information on the nature and scope of commonly used tests, their reliability and validity, administration, scoring and interpretation, and on how the tests may differ and complement each other in their utility with specific populations. Part 1 of the Handbook of Psychoeducational Assessment focuses on ability assessment and the use of full battery intelligence tests as well as brief scales and short forms. Part 2 discusses achievement and the expanded role of psychologists in consultation with educators. Part 3 covers behavior assessment with special attention given to discussion of which tests are most suitable for assessing specific behavioral problems such as ADHD, anxiety, and depression. The final section recognizes the importance of context and person sensitive assessment practices, discussing cross-cultural assessment, neuropsychological assessment, and the usefulness of dynamic assessment for program planning and intervention delivery. Key Features: Covers the most commonly used and newest assessment instruments Describes the nature, scope, reliability, and validity of each test Discusses the administration, scoring, and interpretation of tests Provides empirical findings on patterns of performance with tested populations Includes case studies to highlight the utility of specific tests for specific populations Illustrates new developments in instrumentation and unique features Covers the most commonly used and newest assessment instruments Describes the nature, scope, reliability, and validity of each test Discusses the administration, scoring, and interpretation of tests Provides empirical findings on patterns of performance with tested populations Includes case studies to highlight the utility of specific tests for specific populations Illustrates new developments in instrumentation and unique features

Practical guide for educational and psychological professionals using norm-referenced tests (tests that are designed to compare students to each other) in the ability, achievement, and behavioral assessment of children. Written by key individuals involved in the construction and evolution of the most widely used tests, this book provides critical information on the nature and scope of commonly used tests, on their reliability, on validity, administration, and scoring, on interpretation of the tests, and on how the tests may differ from each other in utility with specific populations.

This textbook provides in-depth instruction for conducting psychoeducational assessments of children in grades K-12 and conveying results through detailed, well-written reports. It takes readers step by step through the assessment process – collecting data, writing reports, and communicating conclusions – for students with conditions spanning the range of IDEA classifications such as autism, learning disabilities, emotional disturbances, and conditions covered by Section 504. The book offers not only a broad understanding of assessment and communication skills, but also of the ethical, legal, cultural, and professional considerations that come with psychoeducational evaluation. And its sample reports model clear, well-organized results accessible to parents and caregivers as well as teachers and colleagues. Key areas of coverage include: • Assessment basics: the testing environment and protocols, interviewing, and observation. • Report writing section by section, from reason for referral to summary and recommendations. • Guidelines for oral reporting, with case examples. • Special issues in psychoeducational assessment and report writing. • Sample psychoeducational reports using this framework. Psychoeducational Assessment and Report Writing is an essential text for graduate students, researchers, professors, and professionals in child and school psychology; assessment, testing, and evaluation; social work; and psychological methods/evaluation.

Accompanys: 9780120585700 .

Since publication in its first edition the Handbook of Psychological Testing has become the standard text for organisational and educational psychologists. It offers the only comprehensive, modern and clear account of the whole of the field of psychometrics. It covers psychometric theory, the different kinds of psychological test, applied psychological testing, and the evaluation of the best published psychological tests. It is outstanding for its detailed and complete coverage of the field, its clarity (even for the non-mathematical) and its emphasis on the practical application of psychometric theory in psychology and education, as well as in vocational, occupational and clinical fields. For this second edition the Handbook has been extensively revised and updated to include the latest research and thinking in the field. Unlike other work in this area, it challenges the scientific rigour of conventional psychometrics and identifies groundbreaking new ways forward.

This book was written for parents who are considering a psychoeducational evaluation for their child to help them become more knowledgeable about the process. The various chapters address: how to decide if a psychoeducational evaluation makes sense, what might take place at an intake meeting, what are the different types of testing, observation, questionnaires and other procedures that may be suggested, how psychologists may adapt the testing to individual needs, how to interpret the scores from a psychoeducational evaluation, how to present test findings in a way that is useful to teachers, what happens at the feedback meeting and how to advocate for your child after the evaluation. The author provides a list of frequently used tests and explains what they measure and what age they are used for. There is also a list of frequently asked questions that are answered. The goal of this book is to help parents to become more savvy about the testing process so that they are more able to work collaboratively with the evaluator to obtain information that will ultimately be beneficial in planning for their child's educational needs.

This thorough analysis of multicultural assessment covers significant issues, including the major instruments and procedures, cognitive and educational assessment, and cross-cultural sensitivity and ethics. Offering the most current empirical research, theory, and specific recommendations, the volume includes case studies that illustrate culturally sensitive procedures and tables that highlight comparisons between particular measures, competencies, and assessment practices. Including updated articles from the original contributors as well as entirely new contributions, the revised version offers compelling ideas for conducting assessments with minority populations.
