Natural Language In natural language semantics special logical systems have been developed to give a more adequate logical account of indefinites in donkey sentences and related constructions (see Dekker, 2012). Apart from these structural differences in the formulation of quantified statements, there are also differences in expressive power.

Semantics refers to the meaning that is conveyed by a text. Semantic analysis is one of the difficult aspects of Natural Language Processing that has not been fully resolved yet. It involves applying computer algorithms to understand the meaning and interpretation of words and how sentences are structured.
