Around the turn of the twentieth century, disorders that Chinese physicians had been writing about for over a millennium acquired new identities in Western medicine—sudden turmoil became cholera; flowers of heaven became smallpox; and foot qi became beriberi. Historians have tended to present these new identities as revelations, overlooking evidence that challenges Western ideas about these conditions. In *Forgotten Disease*, Hilary A. Smith argues that, by privileging nineteenth century sources, we misrepresent what traditional Chinese doctors were seeing and doing, therefore unfairly viewing their medicine as inferior. Drawing on a wide array of sources, ranging from early Chinese classics to modern scientific research, Smith

traces the history of one representative case, foot qi, from the fourth century to the present day. She examines the shifting meanings of disease over time, showing that each transformation reflects the social, political, intellectual, and economic environment. The breathtaking scope of this story offers insights into the world of early Chinese doctors and how their ideas about health, illness, and the body were developing far before the advent of modern medicine. Smith highlights the fact that modern conceptions of these ancient diseases create the impression that the West saved the Chinese from age-old afflictions, when the reality is that many prominent diseases in China were actually brought over as a result of imperialism. She invites the reader to reimagine a history of Chinese

Recent rapid globalisation of manufacturing industries leads to a drive and thirst for rapid advancements in technological development and expertise in the fields of advanced design and manufacturing, especially at their interfaces. This development results in many economical benefits to and improvement of quality of life for many people all over the world. Technically speaking, this rapid development also create many opportunities and challenges for both industrialists and academics, as the design requirements and constraints have completely changed in this global

design and manufacture environment. Consequently the way to design, manufacture and realise products have changed as well. The days of designing for a local market and using local suppliers in manufacturing have gone, if enterprises aim to maintain their competitiveness and global expansion leading to further success. In this global context and scenario, both industry and the academia have an urgent need to equip themselves with the latest knowledge, technology and methods developed for engineering design and manufacture. To address this shift in engineering design and manufacture, supported by the European Commission under the Asia Link Programme with a project title FASTAHEAD (A Framework Approach to Strengthening Asian Higher Education in Advanced Design

The diminishment of Arctic sea ice has led to increased human activities in the Arctic, and has heightened interest in, and concerns about, the region's future. The United States, by virtue of Alaska, is an Arctic country and has substantial interests in the region. On January 21, 2015, President Obama issued an executive order for enhancing coordination of national efforts in the Arctic. The United States assumed the chairmanship of the Arctic Council on April 24, 2015, and will serve in that capacity for two

years. Record low extents of Arctic sea ice over the past decade have focused scientific and policy attention on links to global climate change and projected ice-free seasons in the Arctic within decades. These changes have potential consequences for weather in the United States, access to mineral and biological resources in the Arctic, the economies and cultures of peoples in the region, and national security.

The five Arctic coastal states—the United States, Canada, Russia, Norway, and Denmark (of which Greenland is a territory)—have made or are in the process of preparing submissions to the Commission on the Limits of the Continental Shelf regarding the outer limits of their extended continental shelves. The Russian submission includes the underwater Lomonosov Ridge, a

feature that spans a considerable distance across the Arctic Ocean. The diminishment of Arctic ice could lead in coming years to increased commercial shipping on two trans-Arctic sea routes—the Northern Sea Route and the Northwest Passage. Current international guidelines for ships operating in Arctic waters are being updated. Changes to the Arctic brought about by warming temperatures will likely allow more exploration for oil, gas, and minerals. Warming that causes permafrost to melt could pose challenges to onshore exploration activities. Increased oil and gas exploration and tourism (cruise ships) in the Arctic increase the risk of pollution in the region. Cleaning up oil spills in ice-covered waters will be more difficult than in other areas, primarily because effective strategies

have yet to be developed. Large commercial fisheries exist in the Arctic. The United States is currently meeting with other countries regarding the management of Arctic fish stocks. Changes in the Arctic could affect threatened and endangered species. Under the Endangered Species Act, the polar bear was listed as threatened on May 15, 2008. Arctic climate change is also expected to affect the economies, health, and cultures of Arctic indigenous peoples. Two of the Coast Guard's three polar icebreakers- Polar Star and Polar Sea-have exceeded their intended 30-year service lives, and Polar Sea is not operational. On May 12, 2011, representatives from the member states of the Arctic Council signed an agreement on cooperation on search and rescue in the Arctic. Although

there is significant international cooperation on Arctic issues, the Arctic is increasingly being viewed by some observers as a potential emerging security issue. Some of the Arctic coastal states, particularly Russia, have announced an intention or taken actions to enhance their military presences in the high north. U.S. military forces, particularly the Navy and Coast Guard, have begun to pay more attention to the region in their planning and operations.

The martial arts novel is one of the most distinctive and widely-read forms of modern Chinese fiction. John Christopher Hamm offers the first in-depth English-language study of this fascinating and influential genre, focusing on the work of its undisputed twentieth-century master, Jin Yong.
