## Keytruda

Keytruda (pembrolizumab) is a type of immunotherapy that helps the immune system fight cancer. It is used to treat melanoma, a type of skin cancer that cannot be treated with surgery or that has spread to other parts of the body. Keytruda is also used to treat other types of cancer, such as lung cancer, stomach cancer, and kidney cancer. It is given as an intravenous (IV) infusion. Keytruda is a type of immunotherapy that helps the immune system fight cancer.
