with its deep roots in poetry, differs from the mainstream in this country. Its full incorporation into Australian art requires a recalibration of our national narrative along the lines that ...

"Sam Sax explores and explodes the linkages between desire, addiction, and the history of mental health. These brave, formally dexterous poems examine antiquated diagnoses and procedures from hysteria to lobotomy; offer meditations on risky sex; and take up the poet's personal and family histories as mental health patients and practitioners ... [this] collection embodies the strange and disjunctive workings of the mind as it grapples to make sense of the world around it"--

sam sax's bury it, winner of the 2017 James Laughlin Award from the Academy of American Poets, begins with poems written in response to the spate of highly publicized young gay suicides in the summer of 2010. What follows are raw and expertly crafted meditations on death, rituals of passage, translation, desire, diaspora, and personhood. What's at stake is survival itself and the archiving of a lived and lyric history. Laughlin Award judge Tyehimba Jess says "bury it is lit with imagery and purpose that surprises and jolts at every turn. Exuberant, wild, tightly knotted mesmerisms of discovery inhabit each poem in this seethe of hunger and sacred toll of toil. A vitalizing and necessary book of poems that dig hard and lift luminously." In this phenomenal second collection of poems, Sam Sax invites the reader to join him in his interrogation of the bridges we cross, the bridges we burn, and bridges we must leap from.

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. "Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

The definitive translation by Dick Davis of the great national epic of Iran—now newly revised and expanded to be the most complete English-language edition A Penguin Classic Dick Davis—"our pre-eminent translator from the Persian" (The Washington Post)—has revised and expanded his acclaimed translation of Ferdowsi's masterpiece, adding more than 100 pages of newly translated text. Davis's elegant combination of prose and verse allows the poetry of the Shahnameh to sing its own tales directly, interspersed sparingly with clearly marked explanations to ease along modern readers. Originally composed for the Samanid princes of Khorasan in the tenth century, the Shahnameh is among the greatest works of world literature. This prodigious narrative tells the story of pre-Islamic Persia, from the mythical creation of the world and the dawn of Persian civilization through the seventh-century Arab conquest. The stories of the Shahnameh are deeply embedded in Persian culture and beyond, as attested by their appearance in such works as The Kite Runner and the love poems of Rumi and Hafez. For more than sixty-five years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,500 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.

The Dead Animal Handbook is a field guide to contemporary American poetry. Collecting and compiling emerging and established writers from a range of backgrounds, this Handbook charts one of poetry's most used tropes in order to bring the dead animal back to life. We're eager and we're earnest. Poets include: Martín Espada, Airea D. Matthews, Jericho Brown, Ocean Vuong, Danez Smith, Traci Brimhall, Hieu Minh Nguyen, Franny Choi, CAConrad, Dean Young, Aziza Barnes, Rachel McKibbens, Hanif Willis-Abdurreqib, D.A. Powell, and many more talents. Warning: if you dare carry on, beware carrion.

A book of loss, looking back, and what binds us to life, by a towering poetic talent, called "one of the poetry stars of his generation" (Los Angeles Times). "We sleep long, / if not sound," Kevin Young writes early on in this exquisite gathering of poems, "Till the end/ we sing / into the wind." In scenes and settings that circle family and the generations in the American South—one poem, "Kith," exploring that strange bedfellow of "kin"—the speaker and his young son wander among the stones of their ancestors. "Like heat he seeks them, / my son, thirsting / to learn those / he don't know / are his dead." Whether it's the fireflies of a Louisiana summer caught in a mason jar (doomed by their collection), or his grandmother, Mama Annie, who latches the screen door when someone steps out for just a moment, all that makes up our flickering precarious joy, all that we want to protect, is lifted into the light in this moving book. Stones becomes an ode to Young's home places and his dear departed, and to what of them—of us—poetry can save.

The tranquility of Mars is disrupted by humans who want to conquer space, colonize the planet, and escape a doomed Earth.

The extraordinary story of the Nazi-era scientific genius who discovered how cancer cells eat—and what it means for how we should. The Nobel laureate Otto Warburg—a cousin of the famous finance Warburgs—was widely regarded in his day as one of the most important biochemists of the twentieth century, a man whose research was integral to humanity's understanding of cancer. He was also among the most despised figures in Nazi Germany. As a Jewish homosexual living openly with his male partner, Warburg represented all that the Third Reich abhorred. Yet Hitler and his top advisors dreaded cancer, and protected Warburg in the hope that he could cure it. In Ravenous, Sam Apple reclaims Otto Warburg as a forgotten, morally compromised genius who pursued cancer single-mindedly even as Europe disintegrated around him. While the vast majority of Jewish scientists fled Germany in the anxious years leading up to World War II, Warburg remained in Berlin, working under the watchful eye of the dictatorship. With the Nazis goose-stepping their way across Europe, systematically rounding up and murdering millions of Jews, Warburg awoke each morning in an elegant, antiques-filled home and rode horses with his partner, Jacob Heiss, before delving into his research at the Kaiser Wilhelm Society. Hitler and other Nazi leaders, Apple shows, were deeply troubled by skyrocketing cancer rates across the Western world, viewing cancer as an existential threat akin to Judaism or homosexuality. Ironically, they viewed Warburg as Germany's best chance of survival. Setting Warburg's work against an absorbing history of cancer science, Apple follows him as he arrives at his central belief that cancer is a problem of metabolism. Though Warburg's metabolic approach to cancer was considered groundbreaking, his work was soon eclipsed in the early postwar era, after the discovery of the structure of DNA set off a search for the genetic origins of cancer. Remarkably, Warburg's theory has undergone a resurgence in our own time, as scientists have begun to investigate the dangers of sugar and the link between obesity and cancer, finding that the way we eat can influence how cancer cells take up nutrients and grow. Rooting his revelations in extensive archival research as well as dozens of interviews with today's leading cancer authorities, Apple demonstrates how Warburg's midcentury work may well hold the secret to why cancer became so common in the modern world and how we can reverse the trend. A tale of scientific discovery, personal peril, and the race to end a disastrous disease, Ravenous would be the stuff of the most inventive fiction were it not, in fact, true.

Shadow is a man with a past. But now he wants nothing more than to live a quiet life with his wife and stay out of trouble. Until he learns that she's been killed in a terrible accident. Flying home for the funeral, as a violent storm rocks the plane, a strange man in the seat next to him introduces himself. The man calls himself Mr. Wednesday, and he knows more about Shadow than is possible. He warns Shadow that a far bigger storm is coming. And from that moment on, nothing will ever be the same...
