Minimal intervention dentistry is a modern dental practice designed around the principal aim of preservation of as much of the natural tooth structure as possible. It uses a disease-centric philosophy that directs attention to first control and management of the disease that causes tooth decay—dental caries—and then to relief of the residual symptoms it has left behind—the decayed teeth. The approach uses similar principles for prevention of future caries, and is intended to be a ...

~~Minimal intervention dentistry — Wikipedia~~

Minimally intervention dentistry (MID) adopts a philosophy that integrates prevention, remineralisation and minimal intervention for the placement and replacement of restorations. The objective is tissue preservation (preferably by preventing disease and intercepting its progress), this means performing treatment with as little tissue loss as possible.

~~Minimal Intervention Dentistry — A New Frontier in ...~~

Minimally invasive dentistry adopts a philosophy that integrates prevention, remineralisation and minimal intervention for the placement and replacement of restorations. Minimally invasive dentistry reaches the treatment objective using the least invasive surgical approach, with the removal of the minimal amount of healthy tissues.

Conclusion The management of dental caries has evolved from G.V. Black ' s “ extension for prevention ” to “ minimally invasive. ” This concept includes early detection of lesions; individual caries risk assessment; nonsurgical interventions; and a modified surgical approach that includes delayed restoration, smaller tooth preparations with modified cavity designs and adhesive dental materials and repair rather than replacement of failing restorations.

~~Minimal intervention dentistry – SlideShare~~

Minimal Intervention Dentistry is a contemporary approach to managing oral and dental healthcare. It is a holistic team-care approach to help patients maintain long-term oral health with preventive, person-centred, behaviour related care plans. The concept is simple: it ' s to empower our patients to take responsibility for their oral health. Early detection, diagnosis, prevention and control of disease is our preference, rather than just drilling and filling.

~~Minimal Intervention Dentistry – dhdc.co~~

It focuses on prevention, remineralization, and minimal dentist intervention. • Using scientific advances, minimally invasive dentistry allows dentists to perform the least amount of dentistry needed while never removing more of the tooth structure than is required to restore teeth to their normal condition. 5 6.

GC Corporation's Minimal Intervention Concept

The concept of minimal intervention operative dentistry is being accepted and taught in more places all the time.

Simply for emphasis the basic principles are repeated here because it is essential that the reader understands the significance of the recognition of caries as a bacterial disease. Once this is established then the entire approach to its treatment needs to be modified.
