There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School: Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. How People Learn II: Learners, Contexts, and Cultures provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

When it comes to motivating people to learn, disadvantaged urban adolescents are usually perceived as a hard sell. Yet, in a recent MetLife survey, 89 percent of the low-income students claimed â▯œI really want to learnâ▯ applied to them. What is it about the school environmentâ▯"pedagogy, curriculum, climate, organizationâ▯"that encourages or discourages engagement in school activities? How do peers, family, and community affect adolescentsâ▯▯ attitudes towards learning? Engaging Schools reviews current research on what shapes adolescentsâ▯▯ school engagement and motivation to learnâ▯"including new findings on studentsâ▯▯ sense of belongingâ▯"and looks at ways these can be used to reform urban high schools. This book discusses what changes hold the greatest promise for increasing studentsâ▯▯ motivation to learn in these schools. It looks at various approaches to reform through different methods of instruction and assessment, adjustments in school size, vocational teaching, and other key areas. Examples of innovative schools, classrooms, and out-of-school programs that have proved successful in getting high school kids excited about learning are also included.

One of the greatest challenges for mental health and other professionals in school settings is to get students, families, and staff willing to partake of and engaged in their services. This is the first book on applying motivational interviewing (MI) is a powerful, evidence-based technique for facilitating behavior change throughout the school environment to help psychologists, counselors and other school-based professionals to improve the effectiveness of their practice. Based on encouraging research on the value of MI in K-12 settings, this practical book explains the basic elements of MI theory and demonstrates, step-by-step, how the four-stage process of engaging, focusing, evoking, and planning can be used with the families of students who need psychological or counseling services, teachers who need consultation and support to improve classroom management, and the students themselves. The book discusses barriers to readiness to change and describes how to foster engagement and compliance with school services to increase the likelihood that positive change will occur. It also describes how MI can be used to increase the effectiveness of inter-professional teams in school settings, along with ways in which MI can be integrated into and build support for already established programs. Richly illustrated with examples of using MI as a strategy for promoting everyday conversations about change--the nucleus of MI practice--the book also includes case studies and sample handouts for mental health professionals, students, family members, and teachers. Key Features: Demonstrates how to apply motivational interviewing to the K-12 environment to help school professionals improve effectiveness Explains the four-stage process of engaging, focusing, evoking, and planning Shows how MI can be used with children, their families, and teachers to facilitate change Describes how MI can be integrated into other established programs Includes plentiful case studies and examples of MI as a strategy for promoting everyday conversations about change

An exploration of the impact of regular or block scheduling on middle school or junior high school students' motivation to participate in physical education.

Combining theory, research, and applications, this popular text guides college students on how to become self-regulated learners. Students gain knowledge about human motivation and learning as they improve their study skills. The focus is on relevant information and features to help students to identify the components of academic learning that contribute to high achievement, to master and practice effective learning and study strategies, and then to complete self-regulation studies that teach a process for improving their academic behavior. A framework organized around motivation, methods of learning, time management, control of the physical and social environment, and monitoring performance makes it easy for students to recognize what they need to do to become academically more successful. Pedagogical features include Exercises, Follow-Up Activities, Student Reflections, Chapter-end Reviews, Key Points, and a Glossary. New in the Fifth Edition Discussion of the importance of sleep in learning and memory Revised and updated chapter on self-regulation of emotions Current research on impact of students▯ use of technology including digital learning platforms and tools, social media, and online learning Updated Companion Website resources for students and instructors

In this comprehensive look at adolescent screening and holistic health in the technology age, Dr. Vincent Morelli reviews the history of the adolescent health screen, what is being used now, and what needs to be considered in the future. An ideal resource for primary care physicians, pediatricians, and others in health care who work with adolescents, it consolidates today▯s available information on this timely topic into a single convenient resource. Covers the history of the adolescent medical history and the need for an update of the biopsychosocial model, which has not significantly changed since 1977. Discusses nutrition screening, sleep screening, exercise screening, adverse childhood experiences (ACEs) screening, educational screening, behavioral and emotional screening, and more. Presents the knowledge and experience of leading experts who have assembled the most up-to-date recommendations for adolescent health screening. Explores today▯s knowledge of health screening and discusses future directions to ensure healthy habits in adolescents, including education and self-efficacy.

Weiner introduces -- and offers his own motivation for producing - - this most impressive work with the following: There are two distinct approaches to the study of motivation. One stratagem is a product of academic, experimental procedures, while the second is an outgrowth of clinical, non-experimental methods. Each of the approaches has unique advantages and disadvantages. But all investigators in this field are guided by a single basic question, namely, "Why do organisms think and behave as they do?" To help answer that basic question, Human Motivation presents an entire range of motivation studies -- from psychoanalytic, social learning and humanistic theory; to social facilitation, arousal, emotions, personal responsibility, and the irrationality of attributions; through chapterand verse of Hullian and Lewinian theory.

Teachers are called nation builders in every country and in every society. The role of teachers is of great importance. It is left to the teachers to inculcate personality characteristics, right values ▯ the values of good citizenship producing law abiding and nation loving citizens. India has made considerable progress in school education since independence with reference to overall literacy, infrastructure and universal access and enrolment in schools. Two major developments in the recent years form the background to the present reform in teacher education ▯ the political recognition of Universalization of Elementary Education (UEE) as a legitimate demand and the state commitment towards UEE in the form of the Right of Children to Free and Compulsory Education Act, 2009. The country has to address the need of supplying well qualified and professionally trained teachers in larger numbers in the coming years. At the same time, the demand for quality secondary education is steadily increasing. It is recommended that the aim should be to reach universal secondary education within a maximum of ten years. Given the problems of inadequate quality in most secondary schools due to poor infrastructure and insufficient and poorly equipped teachers, the need for addressing the professional education of secondary teachers acquires great importance. The education of teachers should be such that teachers should set an example and provide for their pupils the ideal of the citizens who is conformist, conservative and cautions. As for their moral character, righteousness, wisdom, honesty are among the adjectives which might be ascribed to them. Teachers should assist the students in their physical, intellectual, religious, social, emotional, spiritual development in the well balanced and harmonious manner and imbue them with human values, which is why teacher education today is an integral part of any educational system. In this study, personality traits of teachers will be analyzed in conjunction with their teaching effectiveness, in order to reach a better understanding of what makes a good teacher, and how to educate him to satisfy the rising demand of the Indian society.

Lack of reading proficiency is a barrier to understanding the academic content of any discipline. Effective Practice for Adolescents with Reading and Literacy Challenges provides secondary teachers with the knowledge and the strategies they need to improve their students' reading skills. Editors Denti and Guerin present a comprehensive collection of articles by a selection of prominent literacy and education researchers that provide practical approaches to improving literacy and offer accounts of successful evidence-based programs and practices that can be tailored to the needs of teachers working with struggling readers. Each chapter includes questions for review, a list of web resources, and suggested small group activities to encourage implementation of chapter ideas and strategies, making Effective Practice for Adolescents with Reading and Literacy Challenges a valuable tool for all teachers, regardless of content area.
