Cisco IOS® Software Release 12.2(6h) includes the MPLS VPN feature. Any Cisco router from the 7200 series or higher supports P functionality. The Cisco 2691, as well as any 3640 series or higher router supports PE functionality. C and CE Routers. You can use any router that can exchange routing information with its PE router.

Configuring a Basic MPLS VPN - Cisco

In Cisco IOS environment, the first and the last hop routers in an MPLS network are called Label Edge Router (LER) while all the routers in between them are called Label Switching Router (LSR). The MPLS path established between LERs is called Label Switching Path (LSP). See picture below for better understanding:

Understanding How MPLS Works in Cisco IOS Router

The command to configure MPLS IP on Cisco IOS router is as simple as typing " mpls ip ", but it needs to be applied on the global configuration and interface configuration of all routers that are going to participate in the MPLS network. In this case, they are P1, P2, PE1, and PE2.
