Loss of consciousness is one of the common neurological emergencies. Epilepsy, sudden drop in blood pressure, stroke, poisoning, low sodium in the blood and liver or renal dysfunction are some of the causes of unconsciousness. Most of these causes are reversible. The outcome depends on the treatment of primary condition.

Neurological emergencies - Oxford Medicine

Neurological emergencies are comparatively rare but can have disastrous consequences if missed or mismanaged. Neurology terrifies many SHOs and even the most experienced A&E specialist is likely to feel nervous at the thought of a patient with myasthenic crisis or cerebral malaria.

Neurological emergencies, 3rd edn | Emergency Medicine Journal

Neurological Emergencies: A Practical Approach is a go-to reference for all medical professions working in emergency treatment settings, and will increase their ability to better care for patients with acute neurological diseases.

Neurological Emergencies | SpringerLink

As an example, abusive head trauma (previously known as shaken baby syndrome) occurs when a baby is shaken violently. A baby's neck muscles are not strong enough to support the baby's head, and as it is shaken back and forth, blood vessels can be torn and brain damage can occur. Neurological Emergencies.

Harvard CME | Neurological Emergencies

Neurological emergencies are seen relatively common by the community practitioner and require careful assessment in order to identify potential serious pathology. Headache presents a particular diagnostic challenge and a good history and examination is vital to avoid missing potentially life-threatening conditions such as subarachnoid haemorrhage.
