Celebrating the Duke offers readers a perceptive, panoramic survey of jazz as revealed, in illuminating detail, through the lives and music of its heroes and heroines, including Bessie Smith, Louis Armstrong, Jimmie Lunceford, Lester Young, Charlie Parker, Albert Ayler, Dizzy Gillespie, Miles Davis, and a rich cache of writings on "America's greatest composer," the Duke himself.

This work portrays the giants of jazz, relates what they achieved, and tells how they made their way in a world not always ready for them. The text offers a clear, informative history of the art, and the photographs present Coleman Hawkins, Count Basie, Charles Mingus, Benny Godman, Louis Armstrong and scores of others. These haunting photographs are supplemented with some rare vintage prints to tell the whole story of jazz from Buddy Bolden to Anthony Braxton.

Language and Conscious Experience is a philosophical theory of consciousness. The book presents a theory that accommodates every aspect of consciousness and conscious experience. The aspects referred to are perception, imagery including memory and dreams, feelings (emotion) and the acquisition and development of language including the origination of meaning. The nature of consciousness is the energies detected by sensory receptors. The nature of conscious experience is the detection by spindle receptors of energies developed and enhanced in intrafusal muscle spindles. We experience the environment in the form of sensations: sight, hearing, taste, smell, and touch, to use the common and traditional identifications. Consciousness is experienced by the detection of intrafusal muscle spindles. The spindle receptor detection is analogous to the detection of the environment by sensory receptors. The difference, of course, is that we are conscious as the detection of the intrafusal spindles. The purpose of the neuromuscular system is response to the energies of the environment. The purpose of the intrafusal spindles is to control the neuromuscular system. Efferent impulse activity from synaptic activity enhances the intrafusal spindles that can then be detected as conscious experience. Energies developed in the intrafusal spindles are determined by the innervation of the system. When enhanced from configured synaptic activity the innervation is modified by the synaptic activity configured by experience.
