Human memory doesn't exist in isolation; the brain isn't just responsible for memorizing things but also for processing the data and acting on that data. Much of our memory and much of the information we receive is visual and it is with visual memories that the designer is mainly concerned.

The Properties of Human Memory and Their Importance for ...

The study of human memory stretches back at least 2,000 years to Aristotle's early attempts to understand memory in his treatise "On the Soul". In this, he compared the human mind to a blank slate and theorized that all humans are born free of any knowledge and are merely the sum of their experiences. Aristotle compared memory to making impressions in wax, sometimes referred to as the "storehouse metaphor", a theory of memory which held sway for many centuries.
