Programmable Logic Controllers (PLCs) are the major components in industrial automation and control systems. The controlling nature of PLC is ranging from simple- push button switching to a single motor to several complex control structures.

Chapter 2 - The Programmable Logic
Controller Output units operate much the
same as the input units with the exception
that the unit is either sinking (supplying a
ground) or sourcing (providing a voltage)
discrete voltages or sourcing analog
voltage or current. These output signals
are presented as directed by the CPU.

Ladder logic is the main programming

Read Online Programmable Logic Controllers

method used for PLCs. As mentioned before, ladder logic has been developed to mimic relay logic. The decision to use the relay logic diagrams was a strategic one. By selecting ladder logic as the main programming method, the amount of retraining needed for engineers and tradespeople was greatly reduced.
