Remove the idler pulley. Remove the belt tensioner with 8mm allen key. Remove Upper alternator pivot screw, also 8mm allen key. This one will most likely be seized so make sure to spray with WD-40 and use a big socket or something else as a breaker bar to remove the screw. I was not able to remove the bottom alternator screw, I ended up stripping it.

Used Saab 9-3 for Sale in New York, NY | Edmunds

Remove the engine mount bracket by removing the two 15mm nuts and studs, and one 19mm nut and stud. Remove the idler pulley. Unfasten the four 18mm bolts, then remove the water pump pulley. Remove the four 3/8 in. bolts and four 1/2 in. bolts, then remove the water pump from the engine.

SOLVED: Engine removal what are the steps for ... - Fixya

Bringing it down to brass tacks, the removal of the engine is pretty straightforward -- disconnect everything and lift it out -- but there are some interesting things to note. This will be more visible in a picture we took on the way in, but a really steep angle of lift is required to get the transmission around the port-side wing, fusebox, and brake booster/master cylinder/reservoir.

Det Sjunde Inseglet - A Saab 9-5 Engine Removal - The ...

The subframe is almost ready to be dropped. The final step is to remove the front torque arm, rear engine motor mount and power steering rack. The front torque arm is a single bolt and the power steering rack has two big bolts. The rear engine mount is difficult as access is very tight. The first step is to remove the top not on the mount.

Step 2 - Dropping the Subframe

Engines. The first-generation 9-5 is powered by Saab's B205 and B235 straight-4 engines, and from 2002 in Europe by an
