These RL for Robotics Challenges are:

- 1) it must learn in very few samples;
- 2) it must learn in domains with continuous state features;
- 3) it must handle sensor and/or actuator delays;
- and 4) it should continually select actions in real time. This book focuses

Reinforcement learning has become a primary paradigm of machine learning. It applies to problems in which an agent (such as a robot, a process controller, or an information-retrieval engine) has to learn how to behave given only information about the success of its current actions. This

Polymeric materials are being used in earthworks construction with ever increasing frequency. The term
