This thesis deals with Rare Earth Elements (REE), especially with neodymium used in permanent magnets, from a very scientific basis by providing basic research data. Despite the fact that REE are newsworthy and very important elements for a considerable bandwidth of today's technologies, accompanied by the monopolistic supply-situation and Chinese politics, there are inexplicable data discrepancies about REE which have been recognized frequently but usually have not been addressed accordingly. So this analysis started with the hypothesis that the four application areas, namely computer hard disk drives (HDD), mobile phones, wind turbines and e-mobility (automotive traction), account for about 80% of the global annual neodymium-demand. The research methodology was a laboratory analysis of the composition of used magnets for HDDs and mobile phones and a literature and official report analysis of wind turbine and automotive neodymium use. The result was amazing and the hypothesis had to be withdrawn as these four areas only account for about 20% of neodymium use. This result raises some questions concerning actual use and thus potential recycling options.

Many of the central issues in modern Indian politics have long been understood in terms of an opposition between ideologies of secularism and communalism. Observers have argued that recent Hindu nationalism is the symptom of a crisis of Indian secularism and have blamed this on a resurgence of religion or communalism. Shabnum Tejani unpacks prevailing assumptions about the meaning of secularism in contemporary politics, focusing on India but with many points of comparison elsewhere in the world. She questions the simple dichotomy between secularism and communalism that has been used in scholarly study and political discourse. Tracing the social, political, and intellectual genealogies of the concepts of secularism and communalism from the late nineteenth century until the ratification of the Indian constitution in 1950, she shows how secularism came to be bound up with ideas about nationalism and national identity.

America's Civil War raged for more than four years, but it is the three days of fighting in the Pennsylvania countryside in July 1863 that continues to fascinate, appall, and inspire new generations with its unparalleled saga of sacrifice and courage. From Chancellorsville, where General Robert E. Lee launched his high-risk campaign into the North, to the Confederates' last daring and ultimately-doomed act, forever known as Pickett's Charge, the battle of Gettysburg gave the Union army a victory that turned back the boldest and perhaps greatest chance for a Southern nation. Now acclaimed historian Noah Andre Trudeau brings the most up-to-date research available to a brilliant, sweeping, and comprehensive history of the battle of Gettysburg that sheds fresh light on virtually every aspect of it. Deftly balancing his own narrative style with revealing firsthand accounts, Trudeau brings this engrossing human tale to life as never before.

An overview of emerging topics, theories, methods, and practices in sonic interactive design, with a focus on the multisensory aspects of sonic experience. Sound is an integral part of every user experience but a neglected medium in design disciplines. Design of an artifact's sonic qualities is often limited to the shaping of functional, representational, and signaling roles of sound. The interdisciplinary field of sonic interaction design (SID) challenges these prevalent approaches by considering sound as an active medium that can enable novel sensory and social experiences through interactive technologies. This book offers an overview of the emerging SID research, discussing theories, methods, and practices, with a focus on the multisensory aspects of sonic experience. Sonic Interaction Design gathers contributions from scholars, artists, and designers working at the intersections of fields ranging from electronic music to cognitive science. They offer both theoretical considerations of key themes and case studies of products and systems created for such contexts as mobile music, sensorimotor learning, rehabilitation, and gaming. The goal is not only to extend the existing research and pedagogical approaches to SID but also to foster domains of practice for sound designers, architects, interaction designers, media artists, product designers, and urban planners. Taken together, the chapters provide a foundation for a still-emerging field, affording a new generation of designers a fresh perspective on interactive sound as a situated and multisensory experience. Contributors Federico Avanzini, Gerold Baier, Stephen Barrass, Olivier Bau, Karin Bijsterveld, Roberto Brasin, Stephen Brewster, Jeremy Coopersotck, Amalia De Gotzen, Stefano Delle Monache, Cumhuri Erkut, George Essl, Karmen Franinovi\u0107, Bruno L. Giordano, Antti Jylh\u00e4, Thomas Hermann, Daniel Hug, Johan Kildal, Stefan Krebs, Anatole Lecuyer, Wendy Mackay, David Merrill, Roderick Murray-Smith, Sile O'Modhrain, Pietro Polotti, Hayes Raffle, Michal Rinott, Davide Rocchesso, Antonio Rod\u00e1, Christopher Salter, Zack Settel, Stefania Serafin, Simone Spagnolo, Jean Sreng, Patrick Susini, Atau Tanaka, Yon Visell, Mike Wenzliewski, John Williamson

An abandoned insane asylum re-opens in Landmark, Oregon. It appears to be a haunted house-more weird than scary-but turns out to be a portal into the Underworld. Ryan and Aquila must figure out what's going on-the two-way movement-and try and stop it. Livingston, a bullfighter-slash-mad scientist, affixes dead souls to human effigies, paving the way for a mass infiltration. Ryan believes Livingston, or their tour guide Whitlock, is the ghost of the old Asylum director (who went mad and burned the place down).Ryan, the narrator, dies halfway through-but it's a blessing in disguise, so he can enter Hell to rescue some others, already entangled in the wars and intrigues of the Six Kings of the Underworld.

The main purpose of this book is to give a systematic treatment of singular homology and cohomology theory. It is in some sense a sequel to the author's previous book in this Springer-Verlag series entitled Algebraic Topology: An Introduction. This earlier book is definitely not a logical prerequisite for the present volume. However, it would certainly be advantageous for a prospective reader to have an acquaintance with some of the topics treated in that earlier volume, such as 2-dimensional manifolds and the funda mental group. Singular homology and cohomology theory has been the subject of a number of textbooks in the last couple of decades, so the basic outline of the theory is fairly well established. Therefore, from the point of view of the mathematics involved, there can be little that is new or original in a book such as this. On the other hand, there is still room for a great deal of variety and originality in the details of the exposition. In this volume the author has tried to give a straightforward treatment of the subject matter, stripped of all unnecessary definitions, terminology, and technical machinery. He has also tried, wherever feasible, to emphasize the geometric motivation behind the various concepts.

This book constitutes the proceedings of the 5th International Conference, CPC 2010 , held in Hualien, Taiwan in May 2010. The 67 full papers are carefully selected from 184 submissions and focus on topics such as cloud and Grid computing, peer-to-peer and pervasive computing, sensor and moile networks, service-oriented computing, resource management and scheduling, Grid and pervasive applications, semantic Grid and ontologies, mobile commerce and services.

Turn-of-the-century Paris was the beating heart of a rapidly changing world. Painters, scientists, revolutionaries, poets -- all were there. But so, too, were the shadows: Paris was a violent, criminal place, its sinister alleyways the haunts of Apache gangsters and its cafes the gathering places of murderous anarchists. In 1911, it fell victim to perhaps the greatest theft of all time -- the taking of the Mona Lisa from the Louvre. Immediately, Alphonse Bertillon, a detective world-renowned for pioneering crime-scene investigation techniques, was called upon to solve the crime. And quickly the Paris police had a suspect: a young Spanish artist named Pablo Picasso...
