This volume is devoted to the translation of Arabic tenses into English, and English tenses into Arabic. Using a corpus of 1,605 examples, it is remarkably exhaustive in its treatment of the categories and forms of both Standard Arabic and English tenses. As such, it represents a useful reference for translators and linguistics researchers. With 260 example sentences and their translations, the book will be very beneficial to teachers and students of Arabic-English and English-Arabic translation. The book is divided into eight chapters. The first presents the variety of Arabic that will be studied and explains why translation should be a text-oriented process. Chapter Two deals with the differences between tense and aspect in Arabic and English, respectively. Chapter Three proposes a model for translating Standard Arabic perfect verbs into English based on their contextual references. The fourth chapter shows the contextual clues that can assist a translator in selecting the proper English equivalents of Arabic imperfect verbs. Chapter Five deals with the translation of Arabic active participles into English. Translating Arabic passive participles into English is handled in Chapter Six. The seventh chapter tackles the translation of English simple and progressive tenses into Arabic. Chapter Eight provides an approach to the translation of English perfect and perfect progressive tenses into Standard Arabic.

This book presents a model for describing translation performance as a basis for contrastive linguistics, in the realm of tense and aspect. It is based on extensive corpus studies investigating the differences between English and Portuguese using authentic translations in the two directions. In method and substance, the book features several original claims, trying to achieve a balance between theoretical issues and the presentation of concrete translation data. In addition, it deals with computational applications of parallel corpora. Translation-based corpus studies should thus be appropriate for translator education, and for introducing contrastive semantics and the methodology of corpus linguistics to students of linguistics and computer science. Researchers in tense and aspect, translation, and corpus linguistics are, nevertheless, the book's primary audience.

In this contrastive French-English grammar, the comparisons between French structures and their English equivalents are formulated as rules which associate a French schema (of a particular grammatical structure) with its translation into an equivalent English schema. The grammar contains all the rules giving the English equivalents under translation of the principal grammatical structures of French: the verb phrase, the noun phrase and the adjuncts (modifiers). In addition to its intrinsic linguistic interest, this comparative grammar has two important applications. The translation equivalences it contains can provide a firm foundation for the teaching of the techniques of translation. Furthermore, such a comparative grammar is a necessary preliminary to any program of machine translation, which needs a set of formal rules, like those given here for the French-to-English case, for translating into a target language the syntactic structures encountered in the source language.

This Handbook is a comprehensive, authoritative, and accessible guide to the topics and theories that current form the front line of research into tense, aspect, and related areas.

The book provides a descriptive account of the semantics of three grammatical areas in informal Welsh: inflections of finite verbs, perfect aspect, and progressive aspect. The analyses distinguish context-independent primary meanings from other meanings which are due to implications and contextual effects. The inflections convey factuality, tense, (morphological) aspect, and habituality, but the inflections and their meanings are differently distributed over different sorts of verbs. The analysis of factuality outlines different sorts of counterfactual situations, and discusses whether counterfactual meaning can best be accounted for in terms of true statements in imagined possible worlds or in terms of false statements in the actual world. The analysis of tense argues that it conveys evaluation time and not situation time, which can be different to evaluation time, and that tense is not a collection of simple labels like 'past' or 'present' but is a combination of two times, a deictic reference time and a relative evaluation time, which organize the tenses as a system. Morphological aspect is discussed in terms of perfective and imperfective meanings. Habituality is a property of situations which can be described by all inflections but the study shows that bod 'be' alone has specialized forms to convey habituality. The discussion of the perfect aspect considers the appropriateness of anterior time, retrospective view, and current relevance to account for its meaning. The author argues that the progressive aspect conveys a durative view and the non-progressive a non-durative view, and shows that the progressive can describe situations which are described by the non-progressive in other languages. The study also considers whether other expressions can be aspect markers. The book shows that the primary meanings of the three grammatical areas are subject to various constraints.

If you want to improve your English communication or writing skills, Read this KMS ENGLISH TRANSLATION BOOK . BY:- Er. S. Raj.

After an introductory chapter that provides an overview to theoretical issues in tense, aspect, modality and evidentiality, this volume presents a variety of original contributions that are firmly empirically-grounded based on elicited or corpus data, while adopting different theoretical frameworks. Thus, some chapters rely on large diachronic corpora and provide new qualitative insight on the evolution of TAM systems through quantitative methods, while others carry out a collostructional analysis of past-tensed verbs using inferential statistics to explore the lexical grammar of verbs. A common goal is to uncover semantic regularities and variation in the TAM systems of the languages under study by taking a close look at context. Such a fine-grained approach contributes to our understanding of the TAM systems from a typological perspective. The focus on well-known Indo-European languages (e.g. French, German, English, Spanish) and also on less commonly studied languages (e.g. Hungarian, Estonian, Avar, Andi, Tagalog) provides a valuable cross-linguistic perspective.

Understand obscure scriptures regarding: creation, salvation, the rapture, end times, the catalyst necessary for the latter year pouring out of God's Spirit, and worldwide revival.

Covering the major approaches to the use of corpus data, this work gathers together influential readings from leading names in the discipline, including Biber, Widdowson, Sinclair, Carter and McCarthy.
