publication in 1704 of Isaac Newton's (1642-1727) second major treatise, the *Opticks*, came at a significant moment in the development of experimental science. Enthusiasm for empirical study of nature, and skill in manipulating experiments, had been building throughout the previous century, and Newton's account of his own experimental studies of light and of his experimental methods fell on fertile ground.

edited by Jill G. Morawski. Laboratory experiments are the principal tools used by psychologists to formulate and test their theories of how the human mind works, yet few histories of psychology have studied the experimental method and how it has changed over time. In this book then distinguished scholars explore the rapid
