The Sixth Extinction: An Unnatural History, by Elizabeth ...

The Sixth Extinction: An Unnatural History is a 2014 non-fiction book written by Elizabeth Kolbert and published by Henry Holt and Company. The book argues that the Earth is in the midst of a modern, man-made, sixth extinction. In the book, Kolbert chronicles previous mass extinction events, and compares them to the accelerated, widespread extinctions during our present time.

Excerpt: The Sixth Extinction: An Unnatural History | Audubon

In *The Sixth Extinction*, Elizabeth Kolbert studies the relationship between human beings and the environment, and concludes that human behavior is on the verge of causing (or may have already caused) a mass-extinction—the sixth in the history of the planet. All over the world, different species are already going extinct, thanks to the declining amount of available undeveloped land, and the rising temperature.

In *The Sixth Extinction*, two-time winner of the National Magazine Award and New Yorker writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden ...

The Sixth Extinction: An Unnatural History | IndieBound.org

Although each mass extinction is unique, Kolbert’s description of the mass-extinction that took place 252 million years ago parallels her discussion of the current Sixth Extinction: then and now, the carbon dioxide concentration of the atmosphere increased, threatening the many different life forms that rely on oxygen to survive.

The Sixth Extinction Chapter 5: Welcome to the ...

Over the last half-billion years, there have been Five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs.

The Sixth Extinction: An Unnatural History by Elizabeth ...

The Sixth Extinction: An Unnatural History (2014) is a nonfiction book about the development, impact, and extinction of various species throughout the history of the world.

The Sixth Extinction Summary and Study Guide | SuperSummary

A fascinating look at the evidence for the world currently being at the start of a sixth extinction event, and how extinctions are driven by human activity. There’s a background to the theories of evolution, and an explanation of why our assumptions of the resilience of the earth’s systems may be horribly wrong.

Draws on the work of geologists, botanists, marine biologists, and other researchers to discuss the five devastating mass extinctions on Earth and predicts the coming of a sixth.

ONE OF THE NEW YORK TIMES BOOK REVIEW'S 10 BEST BOOKS OF THE YEAR A major book about the future of the world, blending intellectual and natural history and field reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and New Yorker writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.

“Over the last half billion years, there have been five major mass extinctions, when the diversity of life on Earth suddenly and dramatically contracted. Scientists are currently monitoring the sixth extinction, predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs. This time around the cataclysm is us. In this book the author tells us why and how human beings have altered life on the planet in a way no species has before. She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin, and through the present day. The sixth extinction is likely to be mankind’s most lasting legacy, compelling us to rethink the fundamental question of what it means to be human”. -- Back cover.

Over the last half a billion years, there have been five mass extinctions of life on earth. Scientists around the world are currently monitoring the sixth, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. Elizabeth Kolbert combines brilliant field reporting, the history of ideas and the work of geologists, botanists and marine biologists to tell the gripping stories of a dozen species – including the Panamanian golden frog and the Sumatran rhino – some already gone, others at the point of vanishing. The sixth extinction is likely to be mankind’s most lasting legacy and Elizabeth Kolbert’s book urgently compels us to rethink the fundamental question of what it means to be human.

So much to read, so little time? This brief overview of *The Sixth Extinction* tells you what you need to know—before or after you read Elizabeth Kolbert’s book. Crafted and edited with care, Worth Books set the standard for quality and give you the tools you need to be a well-informed reader. This short summary and analysis of *The Sixth Extinction: An Unnatural History* by Elizabeth Kolbert includes: Historical context Chapter-by-chapter overviews Detailed timeline of key events Important quotes Fascinating trivia Glossary of terms Supporting material to enhance your understanding of the original work About *The Sixth Extinction* by Elizabeth Kolbert: Our planet has endured five events of mass extinction, from centuries of catastrophic heating and cooling to the asteroid that fell to earth and ended the Cretaceous Period. We are currently facing the sixth extinction, and this time the human species is to blame. Elizabeth Kolbert travels the world and meets with scientists who are grappling with the ecological outcomes of human activity. Her Pulitzer Prize–winning modern science classic tells the stories of thirteen different species that have already disappeared or are on the brink of extinction as a result of human activity. A captivating blend of research and historical anecdotes enlightens readers about the unintentional consequences of our behaviors, from climate change and global warming to invasive species and overexploitation. The summary and analysis in this ebook are intended to complement your reading experience and bring you closer to a great work of nonfiction.

A new edition of the book that launched Elizabeth Kolbert’s career as an environmental writer—updated with three new chapters, making it, yet again, “irreplaceable” (*Boston Globe*). Elizabeth Kolbert’s environmental classic *Field Notes* from a Catastrophe first developed out of a groundbreaking, National Magazine Award-winning three-part series in *The New Yorker*. She expanded it into a still-concise yet richly researched and damning book about climate change: a primer on the greatest challenge facing the world today. But in the years since, the story has continued to develop; the situation has become more dire, even as our understanding grows. Now, Kolbert returns to the defining book of her career. She has added a chapter bringing things up-to-date on the existing text, plus three new chapters--on ocean acidification, the tar sands, and a Danish town that’s gone carbon neutral—making it, again, a must-read for our moment.

The bestselling author of *Longitude* and *Galileo’s Daughter* tells the story of Nicolaus Copernicus and the revolution in astronomy that changed the world.

Elaborate pop-ups feature some wonderfully creepy creatures that just might dominate the ecosystem and be essential to our planet's survival in an eerily realistic future world. Whether or not we know it, the sixth global extinction is already under way, propelled not by a meteor but by human activity on Earth. Take a long step forward into the year 4847 with the help of stunning pop-ups portraying eight fantastical creatures, along with spreads and flaps presenting details about each one. Paper engineer Shawn Sheehy envisions the aftermath of extinction as a flourishing ecosystem centered around fictional creatures that could evolve from existing organisms. Promising high appeal for science-fiction fans of all ages -- and plenty of food for discussion -- this evolutionary extravaganza offers a time line of the six extinction events in Earth's history, a "field guide" to each creature, a diagram of species relationships, a habitat map of the (imagined) ruins of Chicago, and an illuminating author's note.

Over the last half billion years, there have been five major mass extinctions, when the diversity of life on Earth suddenly and dramatically contracted. Scientists are currently monitoring the sixth extinction, predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs. This time around the cataclysm is us. In this book the author tells us why and how human beings have altered life on the planet in a way no species has before. She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin, and through the present day. The sixth extinction is likely to be mankind’s most lasting legacy, compelling us to rethink the fundamental question of what it means to be human.
