Mark Schultz's words combine with Zander Cannon and Kevin Cannon's pictures in a dynamic enzymatic reaction that gives readers a glimpse at how life works. Ambitious, expansive, and completely successful, the story in *The Stuff of Life* starts on the invisible rungs of DNA and climbs without a misstep across the millennia of organic evolution. With the help of Bloort, an alien exploring the wonders of earthly genetics, we get to see our evolutionary and genetic heritage in a new light.

*The Stuff of Life* was HowStuffWorks's first attempt at an edited, produced, and non-continuous podcast, and it was great. The subjects discussed felt important, and Julie did very well presenting them. The miscarriage one really stood out to us. Ultimately, this show's legacy is filled by all of the content that came after it.

The Stuff of Life is a memoir by journalist Karen Karbo, who unflinchingly and honestly recounts the death of her dad from lung cancer. It is a struggle for her to take care of her father, a tough, hardened cowboy who collects guns and definitely does not make the ideal patient. He continues to smoke a pack a day despite his diagnosis.

Life is a characteristic that distinguishes physical entities that have biological processes, such as signaling and self-sustaining processes, from those that do not, either because such functions have ceased (they have died), or because they never had such functions and are classified as inanimate. Various forms of life exist, such as plants, animals, fungi, protists, archaea, and bacteria.

In her gorgeous new book, sought-after interiors stylist Hilary Robertson reveals a multitude of different ways to style and display the “ the stuff of life ” – the flotsam and jetsam of possessions that we all slowly acquire.

Introduces the history and science of genetics through the story of an alien scientist researching humans to find a cure for an alien disease.

Demonstrates how possessions can be used to decorate interior spaces, and showcases homes accessorized in styles that include neatnik, bohemian, and naturalist.

Hilary Robertson reveals a multitude of ways to style and display the “stuff of life”—the flotsam and jetsam of possessions, from pictures and ornaments to hats and bicycles, that we accumulate over the course of time. In the first chapter, How to Arrange your Stuff, Hilary identifies and illustrates four different approaches to arrangements—intuitive, narrative, practical, and curatorial—and shows how each one can be achieved. She also considers the variety of display locations available within the home—walls, mantelpieces, windowsills, chests of drawers, tabletops—and suggests how to make the most of them.

Next, in *Stories Told by Real Homes*, Hilary shares insider knowledge drawn from the experience of creating interiors that fall into five different styles—Neatnik, Bohemian, Naturalist, Sculpture Vulture, and Noble Salvage. Some people are magpies—they love stuff; finding, collecting, and displaying it—while their opposite, the minimalists, are on a mission to contain or tame it. The ideas in this book will appeal to magpies, minimalists, and everyone in between.

Selected for *The Globe 100 Books* in 2013. With the 2013 CBC Massey Lectures, bestselling author Lawrence Hill offers a provocative examination of the scientific and social history of blood, and on the ways that it unites and divides us today. Blood runs red through every person's arteries and fulfills the same functions in every human being. The study of blood has advanced our understanding of biology and improved medical treatments, but its cultural and social representations have divided us perennially. Blood pulses through religion, literature, and the visual arts. Every time it pools or spills, we learn a little more about what brings human beings together and what pulls us apart. For centuries, perceptions of difference in our blood have separated people on the basis of gender, race, class, and nation. Ideas about blood purity have spawned rules about who gets to belong to a family or cultural group, who enjoys the rights of citizenship and nationality, what privileges one can expect to be granted or denied, whether you inherit poverty or the right to rule over the masses, what constitutes fair play in sport, and what defines a person's identity. *Blood: The Stuff of Life* is a bold meditation on blood as an historical and contemporary marker of identity, belonging, gender, race, class, citizenship, athletic superiority, and nationhood.

An accessible graphic introduction to evolution for the most science-phobic reader Illustrated by the brilliant duo Kevin Cannon and Zander Cannon, this volume is written by the noted comic author and professor of biology Jay Hosler. Evolution features the same characters introduced in the highly regarded *The Stuff of Life: A Graphic Guide to Genetics and DNA*, now here to explain the fundamentals of the evolution of life on earth. On the heels of explaining to his planetary leader the intricacies of human genetics in *The Stuff of Life*, the intrepid alien scientist Bloort-183 is charged in this sequel with covering the wider story of evolution. Using the same storytelling conceit that *Plenty* magazine declared “so charming that you won’t even notice you’ve absorbed an entire scientific field” and that caused *Seed* to pick *The Stuff of Life* as a best book of 2008, *Evolution* brilliantly answers *Wired*’s demand, “What’s the solution to America’s crisis in science education? More comic books!” *Evolution*, the most accessible graphic work on this universally studied subject, takes the reader from earth’s primordial soup to the vestigial structures, like the coccyx and the male nipple, of modern humans. Once again, the award-winning illustrations of the Cannons render the complex clear and everything cleverly comedic. And in Hosler, *Evolution* has an award-winning biology teacher whose science comics have earned him a National Science Foundation grant and an interview on NPR’s *Morning Edition*.

Does putting your smartphone on the dinner table impact your relationships? How does where you place your TV in your home affect your family? *The Stuff of Family Life* takes readers inside the changing world of families through a unique examination of their stuff. From digital family photo albums to the growing popularity of “man caves,” author Michelle Janning looks at not only what large demographic

studies say about family dynamics but also what our lives—and the stuff in them—say about how we relate to each other. The book takes readers through various phases of family life, including dating, marriage, parenting, divorce, and aging, while paying attention to how our choices about our spaces and objects impact our lives. Janning has joked, “I’m not a social scientist who uses large national datasets to illustrate family life; I’m the social scientist who asks people to examine what’s in their underwear drawers to tell stories about their family life.” From underwear drawers to calendars, *The Stuff of Family Life* offers an illuminating and entertaining look at the complexities of American families today.

Stem cell therapy is ushering in a new era of medicine in which we will be able to repair human organs and tissue at their most fundamental level- that of the cell. The power of stem cells to regenerate cells of specific types, such as heart, liver, and muscle, is unique and extraordinary. In 1998 researchers learned how to isolate and culture embryonic stem cells, which are only obtainable through the destruction of human embryos. An ethical debate has raged since then about the ethics of this research, usually pitting pro-life advocates vs. those who see the great promise of curing some of humanity's most persistent diseases. In this book Cynthia Cohen agrees that we need to work toward a consensus on the issue of how we treat the embryo. But more broadly she claims that we need to transform and expand the ethical and policy debates on stem cells (adult and embryonic). This important and much-needed book is both a primer and a means by which to understand the implications of this research. Cohen starts by introducing readers to the basic science of stem cell research, and the core ethical questions surrounding the embryo. She then expands the scope of the debate, looking at the moral questions that will crop up down the line, such as e.g. the use of therapeutic cloning to overcome the body's immune resistance to stem cells; the ethics of using animals to test stem cells; how to disentangle federal and state legal and

regulatory policies in pursuit of a coherent national policy; and how to develop an ethics of stem cell research that will accommodate new techniques and controversies that we cannot even foresee now. Her final chapter develops a concrete plan for an oversight system for this research. This is the first single-author book that addresses the many broad ethical and legal issues related to stem cells, and it should be of great interest to bioethicists, researchers, clinicians, philosophers, theologians, lawyers, policy makers, and general readers.

Fat: such a little word evokes big responses. While 'fat' describes the size and shape of bodies, our negative reactions to corpulent bodies also depend on something tangible and tactile; as this book argues, there is more to fat than meets the eye. *Fat: A Cultural History of the Stuff of Life* offers a historical reflection on how fat has been perceived and imagined in the West since antiquity. Featuring fascinating historical accounts, philosophical, religious and cultural arguments, including discussions of status, gender and race, the book digs deep into the past for the roots of our current notions and prejudices. Three central themes emerge: how we have perceived and imagined obesity over the centuries; how fat as a substance has elicited disgust and how it evokes perceptions of animality; but also how it has been associated with vitality and fertility. By exploring the complex ways in which fat, fatness and fattening have been perceived over time, this book provides rich insights into the stuff our stereotypes are made of.

A lighthearted exploration of genetics, presented in a graphic comic form and written from the perspective of asexual extraterrestrial Bloort 183, shares the alien scientist's accessible observations on everything from history and evolution to DNA and parthenogenesis. Simultaneous.
