"The Unfinished Game" is a quest to calculate how the pot or winnings should be divided if the game was not able to be played to completion. The key insight provide by Fermat was to focus on future rather than past outcomes.

The problem of points, also called the problem of division of the stakes, is a classical problem in probability theory. One of the famous problems that motivated the beginnings of modern probability theory in the 17th century, it led Blaise Pascal to the first explicit reasoning about what today is known as an expected value. The problem concerns a game of chance with two players who have equal chances of winning each round.

The issue remained intractable until Blaise Pascal wrote to Pierre de Fermat in 1654, outlining a solution to the "unfinished game"

Download File PDF The Unfinished Game Pascal Fermat And Seventeenth Century

problem: how do you divide the pot when
players are forced to end a game of dice
before someone has won? The idea turned out
to be far more seminal than Pascal realized.
