Familial hypercholesterolemia, or FH, is a potentially lethal, inherited disorder characterized by an extremely high blood cholesterol level— 500 milligrams per deciliter or more compared to the under 200 milligrams per deciliter that physi-

Part A: The Inheritance Pattern of FH

TreatmentTreating the hereditary form of hypercholesterolemia takes a more aggressive form than that used for lifestyle-induced high cholesterol. Since FH causes high cholesterol levels that are genetic and not lifestyle-induced, FH patients usually need medications that lower cholesterol levels in addition to a diet low in saturated fat, regular exercise and eliminating smoking and exposure to secondhand smoke.

High Cholesterol vs Familial Hypercholesterolemia | FH ...

the LDLR protein is encoded on the LDLR gene and if it is not working right then cell surface receptors for LDL may be defective or absent resulting in unregulated synthesis of LDL-C normally these receptors help remove cholesterol from the body
