An extraordinary collection of thematically linked essays, including THE UNCANNY, SCREEN MEMORIES and FAMILY ROMANCES. Leonardo da Vinci fascinated Freud primarily because he was keen to know why his personality was so incomprehensible to his contemporaries. In this probing biographical essay he deconstructs both da Vinci's character and the nature of his genius. As ever, many of his exploratory avenues lead to the subject's sexuality - why did da Vinci depict the naked human body the way he did? What of his tendency to surround himself with

While much has been written about biomass conversions, no single textbook contains all the information needed to teach a biomass conversion course—until now. *Introduction to Biomass Energy Conversions* presents a comprehensive review of biomass resources available for conversion into heat, power, and biofuels. The textbook covers biomass characterization and discusses facilities, equipment, and standards (e.g. ASTM or NREL) used for analysis. It examines the range of biomass resources available for conversion and presents traditional biomass conversion processes along with extensive biomass characterization data tables, illustrations, and graphical presentations of the various biomass energy conversion processes. The author also describes how to set up a laboratory for

No one knows what the price of oil will be next year or in future decades. It is governed by many factors other than supply and demand (politics, wars, etc.), however, whatever the future of energy is, bio-fuels will play an important role. This technical guide prepares students for managing bio-refineries, no matter what type of bio-fuel is produced. It also provides practicing engineers with a resource for starting a small bio-fuel business.
