"Genre theory in the past few years has contributed immensely to our understanding of the way discourse is used in academic, professional and institutional contexts. However, its development has been constrained by the nature and design of its applications, which have invariably focused on language teaching and learning, or communication training and consultation. This has led to the use of simplified and idealised genres. In contrast to this, the real world of discourse is complex, dynamic and unpredictable. This tension between the real world of written discourse and its representation in applied genre-based literature is the main theme of this book. The book addresses this theme from the perspectives of four rather different worlds: the world of reality, the world of private intentions, the world of analysis and the world of applications. Using examples from a range of situations including advertising, business, academia, economics, law, book introductions, reports, media and fundraising, Bhatia uses discourse analysis to move genre theory away from educational contexts and into the real world."--Bloomsbury Publishing.

This book extends the scope and coverage of genre theory, giving more emphasis to what is known as pragmatic space; in other words it integrates the study of discourse at the textual level with the study of how that discourse operates in its social context.

This introductory textbook presents a variety of approaches and perspectives that can be employed to analyze any sample of discourse. The perspectives come from multiple disciplines, including linguistics, sociolinguistics, and linguistic anthropology, all of which shed light on meaning and the interactional construction of meaning through language use. Students without prior experience in discourse analysis will appreciate and understand the micro-macro relationship of language use in everyday contexts, in professional and academic settings, in languages other than English, and in a wide variety of media outlets. Each chapter is supported by examples of spoken and written discourse from various types of data sources, including conversations, commercials, university lectures, textbooks, print ads, and blogs, and concludes with hands-on opportunities for readers to actually do discourse analysis on their own. Students can also utilize the book's comprehensive companion website, with flash cards for key terms, quizzes, and additional data samples, for in-class activities and self-study. With its accessible multi-disciplinary approach and comprehensive data samples from a variety of sources, Discourse Analysis is the ideal core text for the discourse analysis course in applied linguistics, English, education, and communication programs.

This volume presents a systematic, reasonably exhaustive, and critical view of the existing scientific literature on the differences between speech and writing and, particularly, the cognitive and cultural implications of these differences. It is unique in its multidisciplinary scope and analytical depth as it brings together, for the first time, this multiplicity of theory and evidence from varied disciplines.

"An outstanding introduction to discourse analysis of written language in an age that is more and more characterized by multilingual, digital, and generically hybrid texts. In an accessible style, Working with Written Discourse illustrates how these texts can be analyzed employing a wide variety of approaches that are critical, multidisciplinary, and productive." - Professor Jaffer Sheyholislami, Carleton University "Comprehensive and up-to-the-minute in its discussion of areas like multimodality and the new media, without overlooking 'older' media and more conventional writing. I will recommend it highly to students at all levels." - Dr Mark Sebba, Lancaster University Addressing the practicalities of research, and embracing the complexity and variety of written forms of language, this book: grounds readers in a broad range of concepts, debates and relevant methods focuses on both theoretical questions and the 'how to' of analysis is loaded with practical activities and advice on the design and execution of research highlights computer-mediated communication and new media discourse, from text messages and tweets to mobile phone novels and online encyclopedias draws on data from international and multilingual communities. The perfect companion to Deborah Cameron's best-selling Working with Spoken Discourse, this book equips readers with practical and conceptual tools to ask questions about written discourse, and to analyse the huge variety of texts that make up our linguistic landscape. It is the essential guide for students of discourse analysis in linguistics, media and communication studies, and for social researchers across the social sciences.

Winner of the AIA Book Prize for a research monograph in the field of English Language and Linguistics (2016) Common patterns of interactions are altered in the digital world and new patterns of communication have emerged, challenging previous notions of what communication actually is in the contemporary age. Online configurations of interaction, such as video chats, blogging, and social networking practices demand profound rethinking of the categories of linguistic analysis, given the blurring of traditional distinctions between oral and written discourse in digital texts. This volume reconsiders underlying linguistic and semiotic frameworks of analysis of spoken and written discourse in the light of the new paradigms of online communication, in keeping with a multimodal corpus linguistics theoretical framework. Typical modes of online interaction encompass speech, writing, gesture, movement, gaze, and social distance. This is nothing new, but here Sindoni asserts that all these modes are integrated in unprecedented ways, enacting new interactional patterns and new systems of interpretation among web users. These "non verbal" modes have been sidelined by mainstream linguistics, whereas accounting for the complexity of new genres and making sense of their educational impact is high on this volume 's agenda. Sindoni analyzes other new phenomena, ranging from the intimate sphere (i.e. video chats, personal blogs or journals on social networking websites) to the public arena (i.e. global-scale transmission of information and knowledge in public blogs or media-sharing communities), shedding light on the rapidly changing global web scenario.

World Building represents the state-of-the-discipline in worlds-based approaches to discourse, collected together for the first time. Over the last 40 years the 'text-as-world' metaphor has become one of the most prevalent and productive means of describing the experiencing of producing and receiving discourse. This has been the case in a range of disciplines, including stylistics, cognitive poetics, narratology, discourse analysis and literary theory. The metaphor has enabled analysts to formulate a variety of frameworks for describing and examining the textual and conceptual mechanics involved in human communication, articulating these variously through such concepts as 'possible worlds', 'text-worlds' and 'storyworlds'. Each of these key approaches shares an understanding of discourse as a logically grounded, cognitively and pragmatically complex phenomenon. Discourse in this sense is capable of producing highly immersive and emotionally affecting conceptual spaces in the minds of discourse participants. The chapters examine how best to document and analyze this and this is an essential collection for stylisticians, linguists and narrative theorists.

Focusing on the first journal in *The Unabridged Journals of Sylvia Plath*, this book writes a convincing case for the value of corpus-based stylistics and narrative psychology in the analysis of representations of the experience of affective states. Situated at the intersection between language study, psychology and healthcare,

this study of the personal writing of a poet and novelist showcases a cutting-edge combination of quantitative and qualitative approaches, including metaphor analysis, corpus methods, and second person narration. Techniques that systematically account for representations of experiences of affective states, such as those in this book, are rare and crucial in improving understanding of these experiences. The findings and methods of this book therefore potentially have bearing on the study, diagnosis and treatment of depression and other mental illnesses. Zsófia Demjén follows the cognitive turn in both literary studies and linguistics here, emerging with a greater understanding of Plath, her diarized output and her experience of her inner world.
