Yamaha P 2200 Power Amplifier

The Yamaha P-2200 is a system

oriented amplifier, made to be

used in conjunction with mixers,

consoles, frequency dividing

networks and speakers - those

made by Yamaha or by other

manufacturers. Like any power

amplifier, the P-2200's

performance depends on system

design and installation, in

addition to it's own capabilities.

7, 2010 at 1:20 AM. Yeah.. I have
a great story about the ol' P-2200.
I used one as a bass guitar
amplifier from 1978 to 1983. One
winter I had a gig in a place called
Havre, Montana, where the temp
reached 56° below zero WITHOUT
any wind chill factor! Fearing ...

Yamaha P-2200 Studio Power Amplifier Amp Owned by Ed ...
The slew rate of the P-2200 is 45 volts per microsecond, or better (at 175 Watts into 8 ohms, 200 kHz square-wave input.) The P-2200 has 1 capacitor in the audio path, an electrolytic which can be replaced with a film type. The P-2100's circuitry is considerably different from the 2200, in my opinion, sonically inferior.

Amplifiers - Yamaha P-2200

The Yamaha P2200 is a simple stereo power amplifier that can be used with just about any set of passive monitors. The P2200 wasn't a piece of gear that I went searching for in any capacity, but merely used it in tandem with a set of monitors in a professional recording studio.

Yamaha P Series Power Amplifier
To achieve this, they made sure that the amplifiers are capable of delivering power that matches the power handling capabilities of the Club Series Speakers, and equipped them with YS Processing (Yamaha Speaker Processing) to deliver a signal that will result in optimum system performance. Power is plentiful, ranging from 3200 watts from the P7000S to 1300 watts from the P2500S in 4 ohms bridged mode.

P Series - Overview - Power Amplifiers - Yamaha

Original Service Manual
Power alone is no virtue, the P2100 has ultra-low distortion, less than 0.05% thd at full rated power - the kind of low distortion that is undetectable by even the most critical listeners. A high damping factor of better than 250 at frequencies below 1kHz reduces the tendency for speaker cone overshoot, giving tighter and better defined bass response.
